

# CLOUD COMPUTING

## PRACTICAL 8:AMAZON SAGEMAKER

Parisi Jariwala

A025

### 1)Creating IAM ROLE and assigning sagemaker permission

The screenshot shows the 'Create role' wizard in the AWS IAM console. The breadcrumb navigation is 'IAM > Roles > Create role'. The left sidebar shows three steps: 'Step 1: Select trusted entity' (active), 'Step 2: Add permissions', and 'Step 3: Name, review, and create'. The main content area is titled 'Select trusted entity' with an 'Info' link. It features a 'Trusted entity type' section with five radio button options: 'AWS service' (selected), 'AWS account', 'Web identity', 'SAML 2.0 federation', and 'Custom trust policy'. Each option has a brief description. Below this is a 'Use case' section with a description 'Allow an AWS service like EC2, Lambda, or others to perform actions in this account.' and a 'Service or use case' dropdown menu set to 'SageMaker'. Underneath, there are two 'Use case' radio button options: 'SageMaker - Execution' (selected) and 'SageMaker - HyperPod Clusters'. At the bottom right of the main content area are 'Cancel' and 'Next' buttons.

**IAM Role is created.**

The screenshot shows the 'Add permissions' step of the 'Create role' wizard. The breadcrumb navigation is 'IAM > Roles > Create role > Add permissions'. The left sidebar shows 'Step 1: Select trusted entity' and 'Step 2: Add permissions' (active). The main content area is titled 'Add permissions' with an 'Info' link. It shows 'Permissions policies (1)' with an 'Info' link and a note: 'The type of role that you selected requires the following policy.' Below this is a table with two columns: 'Policy name' and 'Type'. The table contains one row: 'AmazonSageMakerFullAccess' (with an icon) and 'AWS managed'. Below the table is a section titled 'Set permissions boundary - optional' with a right-pointing arrow. At the bottom right of the main content area are 'Cancel', 'Previous', and 'Next' buttons.

### 2) creating s3 bucket named mygroup2

**General purpose buckets** | Directory buckets

**General purpose buckets (6)** [Info](#) [All AWS Regions](#)

Buckets are containers for data stored in S3.

Find buckets by name

Name	AWS Region	IAM Access Analyzer	Creation date
<a href="#">bucketcool2</a>	Europe (Stockholm) eu-north-1	<a href="#">View analyzer for eu-north-1</a>	August 31, 2024, 16:17:34 (UTC+05:30)
<a href="#">elasticbeanstalk-us-east-1-630422386614</a>	US East (N. Virginia) us-east-1	<a href="#">View analyzer for us-east-1</a>	September 14, 2024, 14:24:29 (UTC+05:30)
<a href="#">lightningbucket</a>	US East (N. Virginia) us-east-1	<a href="#">View analyzer for us-east-1</a>	July 27, 2024, 16:10:56 (UTC+05:30)
<a href="#">quickbu</a>	US East (N. Virginia) us-east-1	<a href="#">View analyzer for us-east-1</a>	August 30, 2024, 20:53:02 (UTC+05:30)
<a href="#">sagemaker-us-east-1-630422386614</a>	US East (N. Virginia) us-east-1	<a href="#">View analyzer for us-east-1</a>	October 24, 2024, 14:53:53 (UTC+05:30)
<a href="#">waterbucketwithnowater</a>	US East (N. Virginia) us-east-1	<a href="#">View analyzer for us-east-1</a>	July 27, 2024, 16:17:54 (UTC+05:30)

**Successfully created bucket "mygroup2"**  
To upload files and folders, or to configure additional bucket settings, choose [View details](#).

Amazon S3 > Buckets

**Account snapshot - updated every 24 hours** [All AWS Regions](#)  
Storage lens provides visibility into storage usage and activity trends. [Learn more](#)

[View Storage Lens dashboard](#)

**General purpose buckets** | Directory buckets

**General purpose buckets (7)** [Info](#) [All AWS Regions](#)

Buckets are containers for data stored in S3.

Find buckets by name

Name	AWS Region	IAM Access Analyzer	Creation date
<a href="#">bucketcool2</a>	Europe (Stockholm) eu-north-1	<a href="#">View analyzer for eu-north-1</a>	August 31, 2024, 16:17:34 (UTC+05:30)
<a href="#">elasticbeanstalk-us-east-1-630422386614</a>	US East (N. Virginia) us-east-1	<a href="#">View analyzer for us-east-1</a>	September 14, 2024, 14:24:29 (UTC+05:30)

### 3)open Amazon SageMaker console

Select Notebook instances and click create notebook instances

Here we will assign the IAM role created earlier i.e fraud\_detection

Amazon SageMaker > Notebooks and Git Repos

## Notebooks and Git repos

▼ Try the new JupyterLab in SageMaker Studio

**Try the new JupyterLab in SageMaker Studio**

- Launch notebooks in seconds and start coding instantly
- Use the similar underlying compute and storage as your notebook instances to enable more features at the same cost
- Seamlessly perform comprehensive ML and analytics workflows, all in one notebook
- Leverage GenAI-powered coding assistance from Amazon CodeWhisperer and JupyterAI to accelerate development
- Collaborate with your peers in real-time on the same notebook for seamless ideation

[Get Started](#)

► How to access JupyterLab in Studio?

**Notebook instances** | Git repositories

**Notebook instances** [Info](#)

Search notebook instances

Name	Instance	Creation time	Status	Actions
<a href="#">franklin</a>	ml.t3.medium	10/24/2024, 2:40:30 PM	InService	<a href="#">Open Jupyter</a>   <a href="#">Open JupyterLab</a>

### 4) CREATE A JUPYTER NOTEBOOK

## Create notebook instance

Amazon SageMaker provides pre-built fully managed notebook instances that run Jupyter notebooks. The notebook instances include example code for common model training and hosting exercises. [Learn more](#)

### Notebook instance settings

Notebook instance name

fraud\_detection

Maximum of 63 alphanumeric characters. Can include hyphens (-), but not spaces. Must be unique within your account in an AWS Region.

Notebook instance type

ml.t3.medium

Platform identifier [Learn more](#)

Amazon Linux 2, Jupyter Lab 3

► Additional configuration

### Permissions and encryption

IAM role

Notebook instances require permissions to call other services including SageMaker and S3. Choose a role or let us create a role with the [AmazonSageMakerFullAccess](#) IAM policy attached.

Fraud\_Detection

Create role using the role creation wizard

Root access - optional

- ☒ Enable - Give users root access to the notebook
- ☐ Disable - Don't give users root access to the notebook
- Lifecycle configurations always have root access

Encryption key - optional

Encrypt your notebook data. Choose an existing KMS key or enter a key's ARN.

No Custom Encryption

## Notebook is created

Success! Your notebook instance is being created.

Open the notebook instance when status is InService and open a template notebook to get started.

[View details](#)

Amazon SageMaker > Notebook instances

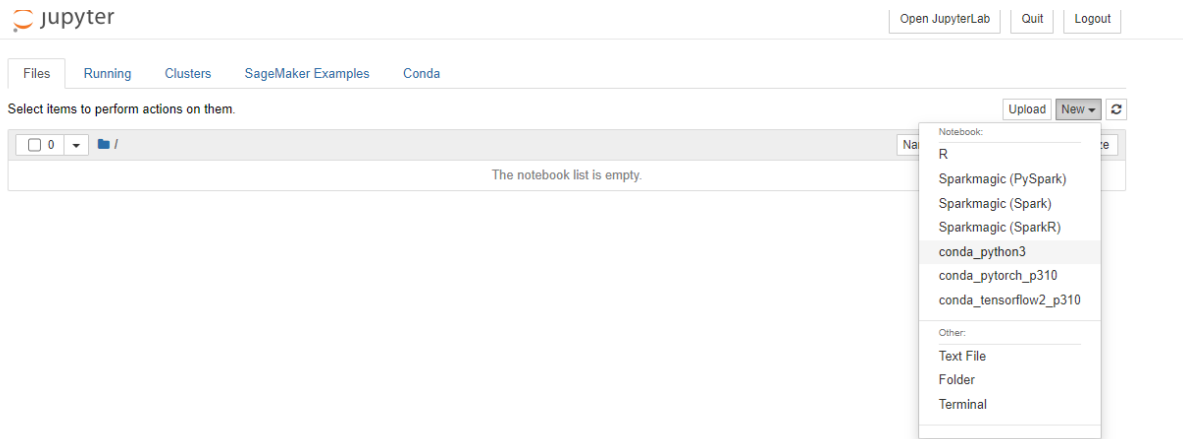

Notebook instances Info

Search notebook instances

Name	Instance	Creation time	Status	Actions
<a href="#">frauddetection</a>	ml.t3.medium	11/7/2024, 12:05:56 PM	Pending	-
<a href="#">franklin</a>	ml.t3.medium	10/24/2024, 2:40:30 PM	InService	<a href="#">Open Jupyter</a>   <a href="#">Open JupyterLab</a>

1. Open Jupyter or JupyterLab according to the interface needed.
2. Go to File menu->Choose New-> Notebook.

### 3. Select Kernel as 'conda\_python3'

### Deploying the model (Here it is stored in s3 bucket that we had created)

```
In [1]: import shap
X, y = shap.datasets.adult()
X_display, y_display = shap.datasets.adult(display=True)
feature_names = list(X.columns)
feature_names

Matplotlib is building the font cache; this may take a moment.
```
